

ON THE FLY

### Categories

### Distance

☐ 0-5 miles

☐ 5-10 miles

☐ 10-20 miles

Find Stuff

### ADDRESS FIELD

If user does not click an address option and clicks "find" the address should default to his/her current location

### CATEGORIES

Use icons or text depending on what makes sense. If all categories are self-explanatory by images, use images (allows greater scaling)

Treat these as toggle buttons grey out what is "off" and not

### DISTANCE

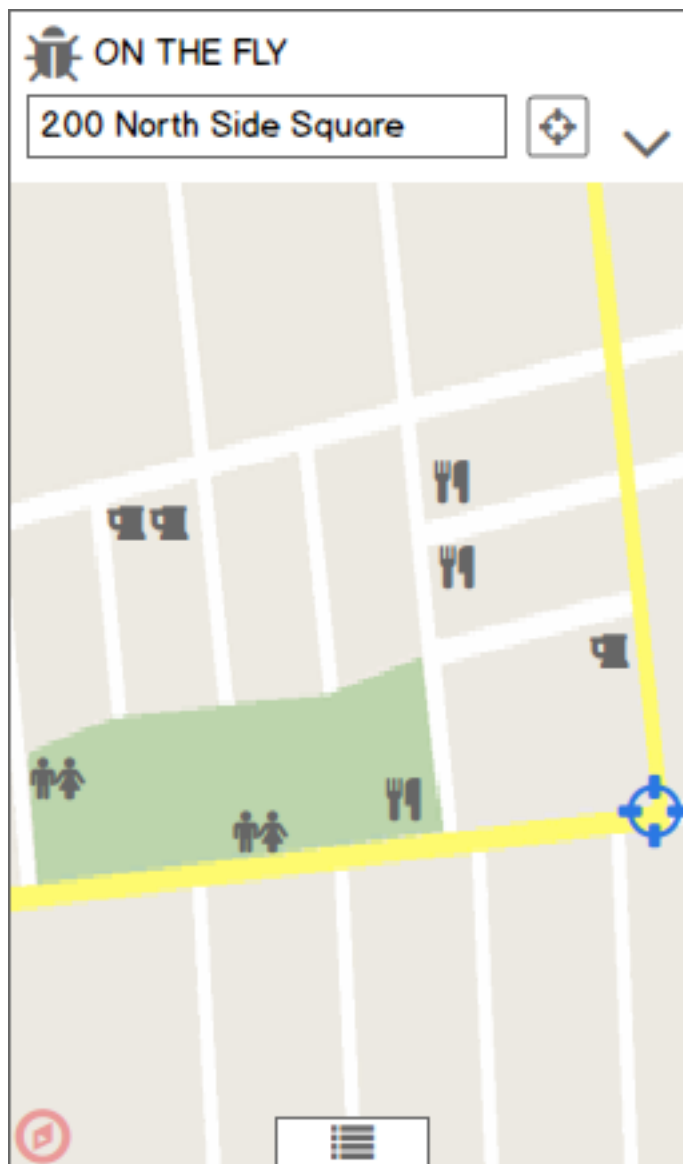

May be a V2 feature

I'm not sure how we should group this and am iffy on this control

### BUTTONS

I'd prefer something more like the images below. May need a little graphic expertise to pretty this. It's just not feasible to make all the images look like this in this program

### ARROW ICON

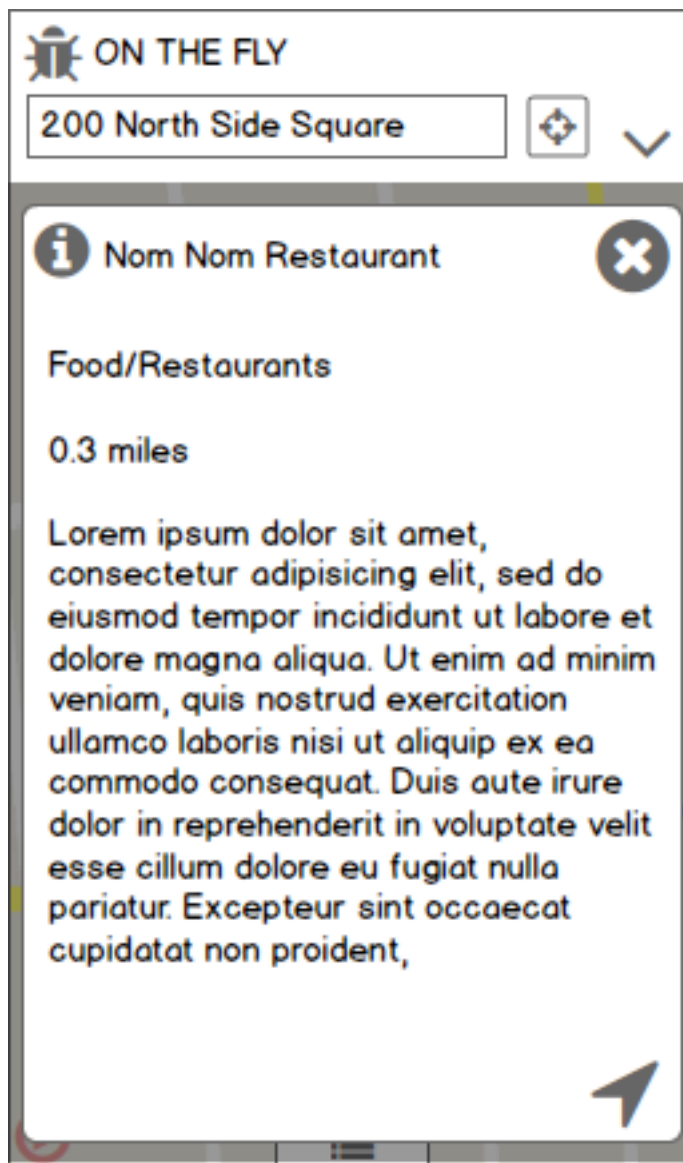

Can be used from any screen to go back to the original search page

### MAP

Results show as category icons on the map  
If the user clicks an item, an info window will appear  
Crosshairs and compass should be used to aid the user

### LIST ICON TAB

Touch/Drag up to open list of results

### MODAL INFO

Clicking anywhere in the "on the fly" header or clicking the "x" icon will close the modal screen and return to last screen viewed.

Data in info determined by the database we use.

### NAVIGATION ICON

This should be on all INFO windows and will kick off the navigation to the location specified

 ON THE FLY

Results

By Category

 Restaurants

Nom Nom

0.3 miles

Yummy Sushi

0.4 miles

Mountain Cafe

0.6 miles

I Heart Food

1.2 miles

 Bars

Drunky McStumbles

0.4 miles

#### MAP ICON TAB

Touch/Drag down to return to map of results

#### RESULTS LIST

Default view is by category (arrange by category then distance within category)

User can toggle the "By Category" button to see ALL results by distance, not arranged by category

If a user clicks and item, an info window will appear. Navigation to location can be kicked off from this list or from the info screen

#### CATEGORIES

Can be removed from search by returning to the home page (use the arrow in the header) or by clicking the "X" next to each category

For V1, no filtering will be provided (I think), but the filter icon and actions can be added in V2. shown here as concept

 ON THE FLY

200 North Side Square

Results

All by Distance

 Nom Nom  
0.3 miles

 Yummy Sushi  
0.4 miles

 Drunky McStumbles  
0.4 miles

 Mountain Cafe  
0.5 miles

 Brickleberry Park  
0.7 miles

 I Heart Food  
1.2 miles

 Homer's Donuts  
1.3 miles

#### RESULTS LIST ALL

User can choose the option "All by distance"

No additional filtering will be allowed here. this screen will allow clicking an item for more info or beginning navigation

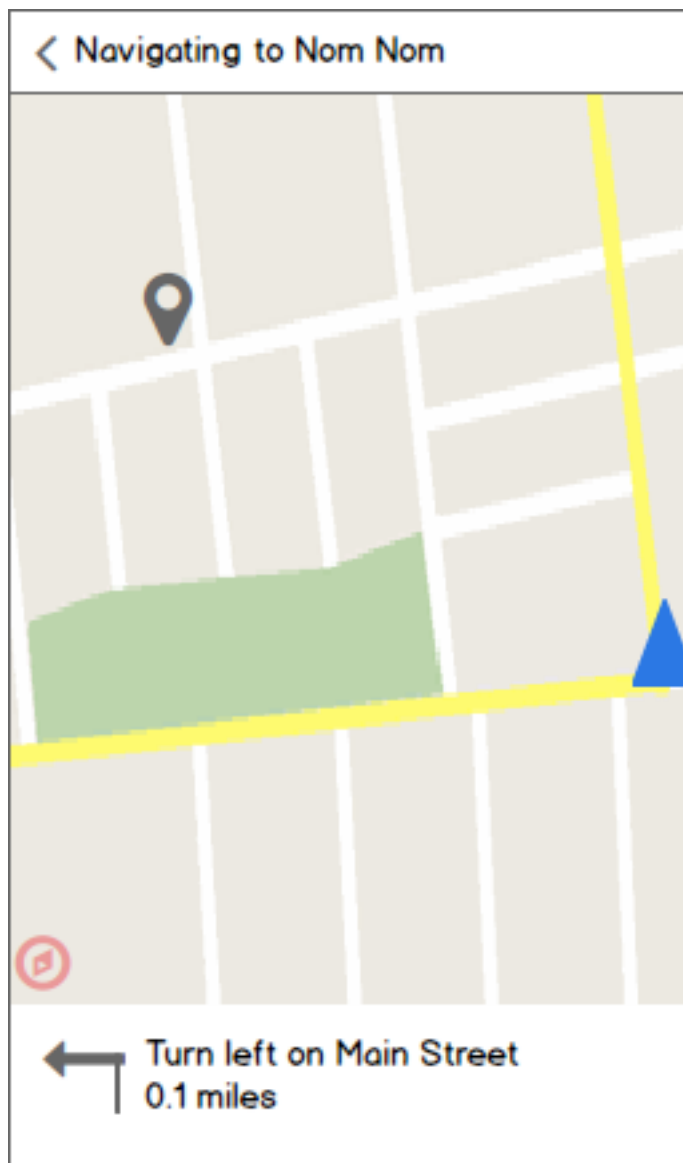

### MODAL INFO

Clicking anywhere in the "on the fly" header or clicking the "x" icon will close the modal screen and return to last screen viewed.

Data in info determined by the database we use.

### NAVIGATION ICON

This should be on all INFO windows and will kick off the navigation to the location specified

## NAVIGATION SCREEN

Will take over entire app screen

Return to previous page using

## MAP

Show user position, map marker for destination and compass

## DIRECTIONS

All can be viewed by clicking or swiping up from the bottom
